🛡️ DUAL-DISK SIMULTANEOUS PHYSICAL PULLOUT RESILIENCE REPORT

Cluster: `cisai-pve` | **Date:** September 24, 2026 22:37:07 | **Target Subsystem:** ZFS RAIDZ2 (zfs-ha)

2 Drives	0 Bytes	Uninterrupted	PASS
SIMULTANEOUS PULL	DATA LOSS	DIRECT I/O ACCESS	TEST VERDICT

1. Executive Summary & Test Verdict

A dual-disk simultaneous physical removal fault was injected against **ZFS RAIDZ2 (zfs-ha)** on node `prox22`. During the 2-drive degraded state, direct synchronous write and read transactions completed with **zero I/O errors and zero data loss**, proving complete N-2 fault tolerance in enterprise production.

2. Telemetry & Resilience Matrix

Metric / Subsystem Parameter	Target Benchmark	Measured Result	Verdict
Tested Subsystem	Enterprise Tier	**ZFS RAIDZ2 (zfs-ha)**	PASS
Injected Fault	Simultaneous N-2 Loss	**Simultaneous 2-Disk Physical Removal (sde & sdf)**	PASS
Direct I/O Under Dual Fault	Continuous / No Lockup	**Uninterrupted / 0 Errors**	PASS
Data Corruption / Loss	0 bytes lost	**0 Bytes Lost (100% Integrity)**	PASS
Post-Insertion Recovery State	Healthy	**ONLINE (0 Errors)**	PASS
