🛡️ ZFS STORAGE SCRUB & BITROT SELF-HEALING AUDIT REPORT

Cluster: `cisai-pve` | **Date:** September 24, 2026 22:41:47 | **Pool:** zfs-ha (127 TiB (7x 20TB SAS RAIDZ2))

127 TiB	0 Errors	Fletcher4/SHA	PASS
POOL CAPACITY	BITROT / CKSUM	INTEGRITY ENGINE	TEST VERDICT

1. Executive Summary & Test Verdict

A full cryptographic ZFS scrub was executed across the 7-disk RAIDZ2 storage pool **zfs-ha** on node `prox22`. End-to-end tree validation confirmed **0 read errors, 0 write errors, and 0 checksum/bitrot errors**, confirming complete storage reliability and silent data corruption protection.

2. Storage Integrity & Health Matrix

Metric / Subsystem Parameter	Target Benchmark	Measured Result	Verdict
Target ZFS Pool	RAIDZ2 (7x 20TB SAS)	**zfs-ha** (127 TiB (7x 20TB SAS RAIDZ2))	PASS
Checksum Verification Engine	Cryptographic Tree	**Fletcher4 / SHA256 Block Tree**	PASS
Read Errors (READ)	0 errors	**0**	PASS
Write Errors (WRITE)	0 errors	**0**	PASS
Checksum / Bitrot Errors (CKSUM)	0 errors	**0**	PASS
Live I/O During Scrub	Uninterrupted	**Seamless (Direct AIO Active)**	PASS
Post-Scrub Health State	ONLINE	**ONLINE (0 Errors)**	PASS

3. Execution Timeline Log
